BASAR

Your cameras, now watching.

AI video analytics on the cameras you already own.

BASAR

BASAR (بصر) is our video management and AI analytics platform. It connects to the IP cameras and recorders already on site over RTSP and ONVIF, raises an alert with the image, the clip and the site attached when something matches a rule you set, and puts every branch on one screen. Nothing at the camera end is replaced.

- Works with the cameras and recorders you have, from any manufacturer that supports RTSP or ONVIF
- Every alert carries its evidence: image, clip, camera, branch and priority
- Recordings kept on your premises, with cloud management as an option
- Proven in a pilot on your own cameras before you commit
