BRANCHCONNECT

Every branch, one network.

Without a leased line at every site.

BRANCHCONNECT

Our own multi-tenant branch connectivity platform. Cameras reach the head-office NVR, phones register to the head-office PBX, and branch-to-branch traffic goes direct — peer-to-peer wherever the network allows it, so adding branches does not add load to a central box.

- A branch online in minutes from a single-use activation token
- Direct WireGuard tunnels, with automatic relay fallback where NAT forbids them
- Per-tenant isolation that is structural, not just an application check
- Live health per gateway — latency, jitter, loss and current path

WIREGUARD | MULTI-TENANT | NAT TRAVERSAL | ZERO-TOUCH ENROLMENT
