EmaLite

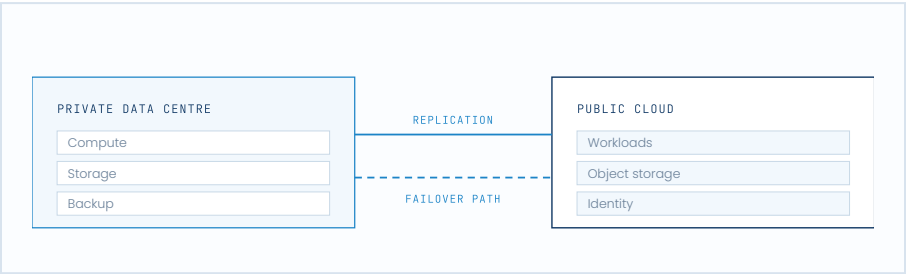

CLOUD & DATA CENTRE

Recovery you have rehearsed.

An RTO nobody has measured is an aspiration with a number on it.

CLOUD & DATA CENTRE

Data centre fabrics, hybrid estates and migrations designed as one system: one addressing plan, one identity model, one recovery strategy. Workloads move in sequenced waves, each with a rollback defined before the wave starts.

- Cisco ACI fabrics designed, commissioned and accepted against the design
- Migration waves with rollback at every step
- Replication topology built from real RTO and RPO targets
- Live failover rehearsed before go-live, not after an incident
