NETWORK INFRASTRUCTURE

A network you can explain.

The first thing blamed and the last thing documented.

NETWORK INFRASTRUCTURE

Campus, branch and wide-area networks designed from the traffic rather than the catalogue. Fabrics sized against real profiles, failover tested at commissioning instead of assumed, and addressing with a single source of truth from day one.

- Campus and data centre switching, including Cisco ACI policy fabrics
- SD-WAN with application-aware path selection and tested failover
- High-density enterprise wireless, designed for the peak hour
- Monitoring in place before handover, not after the first outage

CISCO ACI | VXLAN | BGP EVPN | SD-WAN | WI-FI 6E
