EmaLite

TECHNOLOGY PORTFOLIO

The platforms we build with.

A statement of where our engineers work. Selection follows the requirement, not a reseller agreement.

Where each platform is used

EmaLite designs, deploys, integrates and supports the platforms below. We are not the manufacturer of any of them, and none of the specifications in a vendor's datasheet originate with us.

MANUFACTURER	WHAT WE DO WITH IT
Cisco	Data centre policy fabrics (ACI, APIC, VXLAN, BGP EVPN), routing and switching, campus networks, security platforms
Huawei	Campus fabrics and SD-Access, enterprise switching and routing
Fortinet	Next-generation firewalls, secure SD-WAN, branch security
Palo Alto Networks	Perimeter security, threat prevention, inspection policy
Juniper	High-performance routing and network automation
VMware	Virtualisation, software-defined data centre, workload mobility
Microsoft	Identity, cloud and collaboration platforms
CommScope	Structured cabling, containment and physical infrastructure
Avaya	Unified communications and contact centre
Gigamon	Network visibility and traffic intelligence

Our role, stated plainly

MANUFACTURER

Not us

Every platform above is designed and manufactured by the company named. Specifications, licensing terms and support entitlements are theirs.

EMALITE'S ROLE

Design · Deploy · Integrate · Support

Architecture, low-level design, commissioning, integration with the rest of the estate, and ongoing support where an agreement is in place

SELECTION

Requirement first

Where two platforms both meet the requirement, we make the trade-off explicit and let you decide

SUPPLY

Hardware and licensing

Sourced, staged, configured to the agreed standard and delivered

PARTNER STATUS AND CERTIFICATIONS

Partner levels and engineer certifications change, so they are not printed here. Where a specific accreditation matters to your procurement process, ask and we will send current evidence.
